Projects

BetterBook – C# .NET MVC, CSS/JS/HTML, jQuery, Bootstrap, SQL Server
Full-stack application with the purpose of helping users find and store books
- Uses Google's Books API to fetch data
- Features include user authentication, searching for books, saving books, removing saved books, learn more about books, recommended books
- Uses SQL databases to store users' books and authentication data

Conway's Game of Life - JavaScript
Demo Available
This is a personal project I created in part to better my programming fundamentals, but mostly to nourish my fascination with the Game of Life
- Implemented an accurate recreation of The Game of Life that models the population growth and decay of cells
- The application uses a bitmap as a liaison between a visualization and the code
Code available upon request

Certifications

Harvard's CS50x
Introduction to the intellectual enterprises of computer science and the art of programming
- Constructed low level file manipulation applications in C
- Implemented low latency spell checker in C – 196,784 words in 0.62 seconds
- Used SQL queries to interpret and analyze databases in meaningful ways
- Designed functional web pages with Flask framework as well as HTML/CSS/JavaScript
